

## Thank you letter

"Artdictators" — well done. Thank you!\*

\* I wanted to stop on this phrase. But the guys asked to tell in detail why they are great, to boast of it to future customers.

The blockchain technology is new. To develop a product in this area, you need to understand how smart contracts work, what is gas, deploy and other subtleties. Also, you need to understand how to use Ethereum, EOS, Metamask, etc. It's hard to find a design team that understands this and can design products intelligent along with the developers.

The guys from Artdictators deeply understood our specifics. They were able to understand our product and integrate into our team, even settled in our office. We have been working closely for about nine months and are not going to stop.

I recommend "Artdictators" to blockchain projects and the rest.

CEO Vasilchikov Yuri
